AMNION MEMBRANE TISSUE

**Safe. Natural. Effective.**

Healing eyes, naturally.

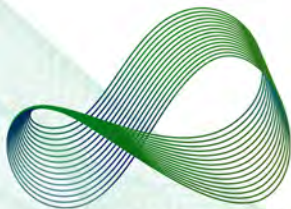

“

## **ABOUT AURORA**

### **The Natural Way to Heal Your Eyes**

Aurora amniotic membrane tissue is a natural way to heal your eyes. Derived from the placenta, Aurora provides healing proteins and growth factors, acting as a super-powered bandaid, helping your eyes recover from various conditions.

## AMNION MEMBRANE TISSUE

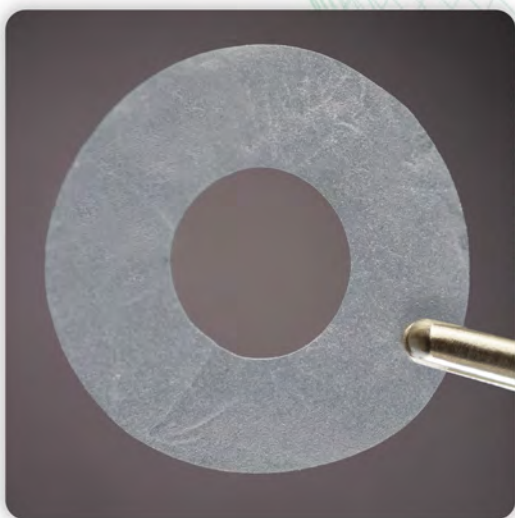

### **HEALING YOUR EYES, NATURALLY**

Complicated eye drop regimens requiring multiple classes of eye medication for weeks, perhaps months, can be costly and uncomfortable, providing only minimal improvements in some cases. Aurora is **ONE TREATMENT** that provides **MULTIPLE BENEFITS** simultaneously, essentially jump-starting the healing process, allowing significant improvements to be made in a relatively short time.

### **THE AURORA DIFFERENCE**

Safe, effective, natural and comfortable, Aurora is an innovative, patent-pending tissue designed to greatly reduce visual obstruction that often accompanies an amnion membrane placement.

Unlike other brands, Aurora features a strategically placed hole in the center that causes you very minimal visual disruption and optimum comfort, allowing you to return to your normal day-to-day activities immediately after treatment.

## **WHAT IS AURORA?**

Aurora is an amniotic membrane approved by the FDA used for treating numerous indications across many medical specialties – from eyes, to severe burns, diabetic ulcers, surgical applications and eyes. Aurora was specially designed to treat various eye surface conditions and disorders, enhancing your healing process. The hole in the center of the tissue allows you to see immediately after the procedure.

## **WHY CHOOSE AURORA?**

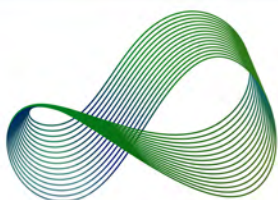

Because you deserve top-notch treatment. Aurora is engineered for your comfort and seamless integration with your eye. It's proven to reduce inflammation, foster healing, and improve patient outcomes overall.

## **HOW DOES AURORA WORK?**

Aurora is an extremely thin biological graft. Application is fast and simple. Your doctor will apply Aurora and cover it with a soft contact lens bandage to ensure the graft doesn't move and stays secure in your eye. In a short period, normally between two and five days, your eye will naturally absorb Aurora. Your doctor will schedule a follow-up appointment to evaluate. If Aurora has absorbed, your doctor will remove the contact lens bandage and assess.

## **IS AURORA SAFE & ETHICAL?**

Absolutely. Aurora adheres to strict FDA rules, regulations and requirements. Aurora is derived from full-term, healthy, pregnant, consenting mothers who choose to donate their birth tissue so their gift can help others.
